# Sobolev spaces on warped products

Nicola Gigli\*      Bang-Xian Han †

April 5, 2018

## Abstract

We study the structure of Sobolev spaces on the cartesian/warped products of a given metric measure space and an interval.

Our main results are:

- the characterization of the Sobolev spaces in such products
- the proof that, under natural assumptions, the warped products possess the Sobolev-to-Lipschitz property, which is key for geometric applications.

The results of this paper have been needed in the recent proof of the ‘volume-cone-to-metric-cone’ property of RCD spaces obtained by the first author and De Philippis.

**Keywords:** warped product, Sobolev space, metric measure space.

**MSC2010:** 53C23, 46E35

## Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
<b>2</b>	<b>Preliminaries</b>	<b>3</b>
2.1	Metric measure spaces . . . . .	3
2.2	Sobolev functions . . . . .	4
2.3	Product spaces . . . . .	5
<b>3</b>	<b>The results</b>	<b>7</b>
3.1	Cartesian product . . . . .	7
3.2	Warped product . . . . .	13
3.3	Sobolev-to-Lipschitz property . . . . .	19

## 1 Introduction

There is a well established definition of the space  $W^{1,2}(X, d, \mathbf{m})$  of real valued Sobolev functions defined on a metric measure space  $(X, d, \mathbf{m})$  ([8], [14], [3]). A function  $f \in W^{1,2}(X, d, \mathbf{m})$
