Abstract

We prove that the commutative nearly absolute valued division algebras have dimension ≤ 2 . This extends a well-known theorem by H. Hopf asserting the same property for each commutative real division algebra of finite dimension. As an application we prove that \mathbb{R} , \mathbb{C} and \mathbb{C}^* are the unique commutative real nearly absolute valued division algebras with norm satisfying $\|x^2\| = \|x\|^2$.

AMS Subject Classification: 17A35, 15A99, 46H70.

Keywords: division algebra, commutative algebra, nearly absolute valued algebra, absolute valued algebra.

0 Introduction

Nearly absolute valued algebras have been introduced in [13] (see also [3] for a more complete information, which includes a quick review in pp. 281-283).
