Abstract

In this paper, we consider the initial boundary value problem for a class of thin-film equations in \mathbb{R}^n with a p -Laplace term and a nonlocal source term $|u|^{q-2}u - \frac{1}{|\Omega|} \int_{\Omega} |u|^{q-2}u dx$. We prove that there exist weak solutions for the problem with arbitrarily initial energy that blow up in finite time. We also obtain the upper bounds for the blow-up time.

Keywords: Thin-film equation, blow-up, upper bound for blow-up time, arbitrary initial energy, nonlocal source

MR Subject Classification 2010: 35K35, 35K92.

1 Introduction

The thin-film equation

$$u_t - \Delta^2 u + \nabla \cdot (f(\nabla u)) = g$$
