To appear in: *Journal of Computational and Applied Mathematics*

Received date: 11 July 2017
Revised date: 16 May 2018

Please cite this article as: J. Li, X. Wang, S. Deng, B. Wang, Symmetric trigonometrically-fitted two-step hybrid methods for oscillatory problems, *Journal of Computational and Applied Mathematics* (2018), <https://doi.org/10.1016/j.cam.2018.05.038>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A general class of trigonometrically-fitted two-step hybrid (TFTSH) methods are proposed.
- General order conditions are derived by introducing the generalized B2-series.
- The symmetry of the new methods is investigated and the symmetric conditions are given.
- A diagonally implicit two-stage symmetric TFTSH method is given.
- Numerical results show the efficiency of our new method.
