To appear in: *Journal of Computational and Applied Mathematics*

Received date: 27 April 2017
Revised date: 22 August 2017

Please cite this article as: H. Zhu, C. Zeng, A novel chaotification scheme for fractional system and its application, *Journal of Computational and Applied Mathematics* (2017), <https://doi.org/10.1016/j.cam.2017.10.008>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- **A new method for chaotifying the fractional order nonlinear systems is proposed.**
- **Fractional operator lying in $(1, 2)$ has the negative damping instability effect.**
- **Three critical orders are introduced to distinguish different complex dynamics.**
