Discrete Modified Projection Method for Urysohn Integral Equations with Smooth Kernels

Rekha P. KULKARNI *and Gobinda RAKSHIT †

Abstract

Approximate solutions of linear and nonlinear integral equations using methods related to an interpolatory projection involve many integrals which need to be evaluated using a numerical quadrature formula. In this paper, we consider discrete versions of the modified projection method and of the iterated modified projection method for solution of a Urysohn integral equation with a smooth kernel. For $r \geq 1$, a space of piecewise polynomials of degree $\leq r - 1$ with respect to an uniform partition is chosen to be the approximating space and the projection is chosen to be the interpolatory projection at r Gauss points. The orders of convergence which we obtain for these discrete versions indicate the choice of numerical quadrature which preserves the orders of convergence. Numerical results are given for a specific example.

Key Words : Urysohn integral operator, Interpolatory projection, Gauss points, Nyström Approximation

AMS subject classification : 45G10, 65J15, 65R20
