

Accepted Manuscript

A mid-late Holocene tidally-influenced drainage system revealed by integrated remote sensing, sedimentological and stratigraphic data

Serena Giacomelli, Veronica Rossi, Alessandro Amorosi, Luigi Bruno, Bruno Campo, Andrea Ciampalini, Andrea Civa, Wan Hong, Maria Sgavetti, Carlos Roberto Souza Filho

PII: S0169-555X(18)30265-4
DOI: doi:[10.1016/j.geomorph.2018.07.004](https://doi.org/10.1016/j.geomorph.2018.07.004)
Reference: GEOMOR 6441
To appear in: *Geomorphology*
Received date: 30 November 2017
Revised date: 28 June 2018
Accepted date: 4 July 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A mid-late Holocene tidally-influenced drainage system revealed by integrated remote sensing, sedimentological and stratigraphic data
