The “Escarot” gas seep, French Massif Central: CO₂ discharge from a quiescent volcanic system – Characterization and quantification of gas emissions

F. Gal, S. Leconte, A. Gadalia

PII: S0377-0273(17)30723-0

DOI: <https://doi.org/10.1016/j.jvolgeores.2018.01.026>

Reference: VOLGEO 6298

To appear in: *Journal of Volcanology and Geothermal Research*

Received date: 11 December 2017

Revised date: 29 January 2018

Accepted date: 30 January 2018

Please cite this article as: F. Gal, S. Leconte, A. Gadalia , The “Escarot” gas seep, French Massif Central: CO₂ discharge from a quiescent volcanic system – Characterization and quantification of gas emissions. The address for the corresponding author was captured as affiliation for all authors. Please check if appropriate. Volgeo(2017), <https://doi.org/10.1016/j.jvolgeores.2018.01.026>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

The “Escarot” gas seep, French Massif Central: CO₂ discharge from a quiescent volcanic system – Characterization and quantification of gas emissions.
