From source to surface: Tracking magmatic boron and chlorine input into the geothermal systems of the Taupo Volcanic Zone, New Zealand

Florence Bégué, Chad D. Deering, Darren M. Gravley, Isabelle Chambefort, Ben M. Kennedy

PII: S0377-0273(17)30147-6
DOI: doi: [10.1016/j.jvolgeores.2017.03.008](https://doi.org/10.1016/j.jvolgeores.2017.03.008)
Reference: VOLGEO 6038

To appear in: *Journal of Volcanology and Geothermal Research*

Received date: 9 September 2016
Revised date: 28 February 2017
Accepted date: 4 March 2017

Please cite this article as: Florence Bégué, Chad D. Deering, Darren M. Gravley, Isabelle Chambefort, Ben M. Kennedy , From source to surface: Tracking magmatic boron and chlorine input into the geothermal systems of the Taupo Volcanic Zone, New Zealand. The address for the corresponding author was captured as affiliation for all authors. Please check if appropriate. Volgeo(2017), doi: [10.1016/j.jvolgeores.2017.03.008](https://doi.org/10.1016/j.jvolgeores.2017.03.008)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

From source to surface: tracking magmatic boron and chlorine input into the geothermal systems of the Taupo Volcanic Zone, New Zealand

HIGHLIGHTS

- Contribution of B and Cl from the magmatic system to geothermal fluids in the TVZ
- Distinct array of bulk compositions for parent fluids in equilibrium with the melt
- New constraints on magmatic source for next generation geothermal models of the central TVZ
- Implications for the use of the Cl flux method to estimate the heat flow
