

Accepted Manuscript

Zircon (Hf, O isotopes) as melt indicator: Melt infiltration and abundant new zircon growth within melt rich layers of granulite-facies lenses versus solid-state recrystallization in hosting amphibolite-facies gneisses (Central Erzgebirge, Bohemian Massif)

Marion Tichomirowa, Martin Whitehouse, Axel Gerdes, Bernhard Schulz

PII: S0024-4937(17)30455-3

DOI: <https://doi.org/10.1016/j.lithos.2017.12.020>

Reference: LITHOS 4519

To appear in:

Received date: 13 July 2017

Accepted date: 23 December 2017

Please cite this article as: Marion Tichomirowa, Martin Whitehouse, Axel Gerdes, Bernhard Schulz, Zircon (Hf, O isotopes) as melt indicator: Melt infiltration and abundant new zircon growth within melt rich layers of granulite-facies lenses versus solid-state recrystallization in hosting amphibolite-facies gneisses (Central Erzgebirge, Bohemian Massif). The address for the corresponding author was captured as affiliation for all authors. Please check if appropriate. Lithos(2017), <https://doi.org/10.1016/j.lithos.2017.12.020>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
