Please cite this article as: Zhang, F., Zhan, J., Zhang, Q., Yao, L., Liu, W., Impacts of land use/cover change on terrestrial carbon stocks in Uganda, *Physics and Chemistry of the Earth* (2017), doi: 10.1016/j.pce.2017.03.005.

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- We use the InVEST model to map and quantify carbon stocks for Uganda.
- Land use/cover change has created hotspots for losses in carbon stocks.
- There were differences in soil carbon stocks between cultivated land and grassland.
- Legislation should be implemented to protect forest land and grassland in Uganda.
