Geological setting of gold mineralisation of the Minvoul greenstone belt (Ntem complex, northern Gabon)

Iglesias-Martínez Mario, Espí José Antonio, Edou-Minko Ambroise

PII: S1464-343X(18)30165-1

DOI: [10.1016/j.jafrearsci.2018.06.011](https://doi.org/10.1016/j.jafrearsci.2018.06.011)

Reference: AES 3237

To appear in: *Journal of African Earth Sciences*

Received Date: 24 November 2017

Revised Date: 7 June 2018

Accepted Date: 9 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

1. Northern Gabon presents a high volume of greenstone belt formations
2. Evidences of gold mineralization have been revealed
3. An orogenic-gold origin is suggested for the gold mineralisation
4. Shearing and felsic intrusion seem to be the main controlling factors
