This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights for “**A Sampling Study on Rock Properties Affecting Drilling Rate Index (DRI)**”

- Magmatic, metamorphic and sedimentary rocks are studied.
- Regression analysis are made on rock and drillability properties.
- Strong correlations between Drilling Rate Index (DRI) and rock properties are found.

Assoc. Prof. Dr. M. Kemal Özfırat
