Tectonics, lithology and climate controls of morphometric parameters of the Edea - Eseka Region (SW Cameroon, Central Africa): Implications on equatorial rivers and landforms

Moussa Nsangou Ngapna, Sébastien Owona, François Mvondo Owono, Jean Engelbert Mpesse, Dieudonné Youmen, Justin Lissom, Joseph Mvondo Ondoa, Georges Emmanuel Ekodeck

PII:	S1464-343X(17)30424-7
DOI:	10.1016/j.jafrearsci.2017.11.008
Reference:	AES 3049
To appear in:	*Journal of African Earth Sciences*
Received Date:	20 February 2017
Revised Date:	26 October 2017
Accepted Date:	10 November 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Morphometric analyses and field survey were correlated in a GIS model.
- Drainage system and landform parameters vary from one watershed to another.
- Morphology is controlled by lithology, tectonic, differential erosion and climate.
- Tectonic, lithology and climate control morphology in Central Africa.
