This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- The quantitative assessment of flash flood parameters from remote sensing images and field survey.
- The development of GIS-spatially distributed unit hydrograph for ungauged basins.
- The interaction of flash floods and waste water disposal sites within the wadis in the Eastern Desert of Egypt.
- The mitigation measures for flash floods to achieve sustainability of water resources.
