Adatom decorated shape-controlled metal nanoparticles: advanced electrocatalysts for energy conversion

Matheus B.C. de Souza , Pablo S. Fernández , J. Solla-Gullón

PII: S2451-9103(18)30044-9
DOI: [10.1016/j.coelec.2018.03.007](https://doi.org/10.1016/j.coelec.2018.03.007)
Reference: COELEC 195

To appear in: *Current Opinion in Electrochemistry*

Received date: 30 January 2018
Revised date: 26 February 2018
Accepted date: 6 March 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Adatom decorated shape-controlled metal nanoparticles are advanced electrocatalysts for many different energy conversion reactions.
- Some of the most relevant contributions in terms of improved activity and stability and modified selectivity are presented.
- Remaining challenges to be undertaken are discussed.
