

## Accepted Manuscript

Title: Does magnification of SEM image influence quantification of particulate matters deposited on vegetation foliage

Authors: Lin Lin, Jingli Yan, Guojian Chen, Rongli Tang, Le Bao, Keming Ma, Weiqi Zhou, Xiu Yuan, Zhe Yin, Shuwen Zhou

PII: S0968-4328(18)30178-1  
DOI: <https://doi.org/10.1016/j.micron.2018.08.003>  
Reference: JMJC 2591

To appear in: *Micron*

Received date: 8-5-2018

Revised date: 9-8-2018

Accepted date: 9-8-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# Does magnification of SEM image influence quantification of particulate matters deposited on vegetation foliage

## Highlights:

- Ultrafine and fine particles are more sensitive to magnification than big particles.
- The percentage of leaf area covered of particles is a relatively stable index.
- Magnifications 1000x and 2000x are more comparable than other magnifications.
