This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Spatial Distribution of Cosmogenic ^{10}Be Derived Denudation Rates Between the Western Tian Shan and Northern Pamir, Tajikistan

Elena Grin¹, Mirjam Schaller¹, Todd A. Ehlers^{1*}

¹University of Tübingen, Department of Geosciences, Wilhelmstraße 56, 72074 Tübingen, Germany.

Highlights:

- Cosmogenic nuclide concentrations constrain regional variations in denudation.
- Modern river samples document lateral denudation gradients along active faults.
- Denudation rate patterns are poorly correlated with precipitation.
- River terrace formation and incision occurred in the late Holocene.
