This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Childhood adversities predicted worse 5-year outcomes among psychosis patients.
- Some specificity in the childhood adversity – outcome associations was found.
- Parental separation predicted poor medication compliance and substance dependence.
- Compulsory admissions were common in those exposed to parental death or separation.
- Institutional care in childhood predicted longer psychiatric inpatient stays.
