This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Numerical approximation is based on shifted Chebyshev polynomials.
- The operational matrices of derivative and pantograph are derived.
- We have provided a rigorous error analysis in L^2 -norm.
- Our results are compared with the solutions obtained by other methods.
- Model is a delay differential equation which has many applications.
