This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- Eight VR locomotion techniques were investigated in a room-scale tracked area.
- A user study was performed with 15 participants.
- Point & teleport, joystick and redirected walking resulted as suitable techniques.
- Hand flapping and flying resulted as not suitable techniques.
