This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- New approach for the construction of staggered unstructured computational grids.
- Use of Regular-Power tessellations to define optimal staggered orthogonal meshes.
- Development of new methods for the optimisation of Regular-Power structures.
- Results confirm Regular-Power approach is superior to Delaunay-Voronoi methods.
- Open-source implementation provided in the JIGSAW meshing library.
