This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- •Use GIS-based spatial analytic methods and spatial Durbin model to study the spatial-temporal variation of financial literacy for the first time.
- •We find that the US states characterized by high financial literacy scores are shown to cluster in the central and northern part of the country over time.
- •We believe that regional financial literacy in US has significant spatial dependence and three regional factors are proved to have direct and indirect effects on financial literacy.
