This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We investigate the impact of terrorism on stock markets dynamics in the SAARC region
- We use an event-study analysis and fixed-effect regression technique
- The attack day negatively affects stock market returns in all groups
- The post-day negatively affects only the less affected countries
