This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Spare parts management for irregular demand items

Highlights

- We confirm the need of a systemic perspective to deal with irregular demand
- We develop the ZIP-METRIC an approach based on Zero-Inflated Poisson distribution
- The analytic model is validated by a simulation approach on 1745 items
- The results confirms the good outcomes of ZIP-METRIC in case of irregular demand
