Title: Pyrolysis Behavior and Chemical Composition of the Precursors Influence on Structure and Properties of Coal-tar-pitch-based Carbon Foams

Authors: Ming Yu, Chaoze Zhong, Yanhui Zhang, Qian-lin Chen, Xianquan Ao, Xianyu Lei, Cuiqin Li

Please cite this article as: Yu M, Zhong C, Zhang Y, Chen Q-lin, Ao X, Lei X, Li C, Pyrolysis Behavior and Chemical Composition of the Precursors Influence on Structure and Properties of Coal-tar-pitch-based Carbon Foams, *Journal of Analytical and Applied Pyrolysis* (2018), https://doi.org/10.1016/j.jaap.2018.06.019

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

1

- CTPs were produced using a new method of treating LTCT with selected solvents.
- The HS, QI, TI contents of CTP precursors were optimized.
- The thermal conductivity of carbon foam was as low as $0.039 \text{ W/m} \cdot \text{K}$.
- Thermal insulation was attributed to the ordered micro-channel in the carbon foam.
