Bifurcation analysis in a delayed fractional neural network involving self-connection

Chengdai Huang, Zhouhong Li, Dawei Ding, Jinde Cao

PII: S0925-2312(18)30752-5
DOI: [10.1016/j.neucom.2018.06.016](https://doi.org/10.1016/j.neucom.2018.06.016)
Reference: NEUCOM 19694

To appear in: *Neurocomputing*

Received date: 14 November 2017
Revised date: 8 May 2018
Accepted date: 20 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- System parameter-induced bifurcation criteria are precisely established for a fractional delayed neural network.
- Effects of fractional order on bifurcation are numerically illustrated via prudential computation.
- Bifurcation diagrams are elaborately plotted.
