Crystallographic, dynamic and Hirshfeld surface studies of charge transfer complex of imidazole as a donor with 3,5-dinitrobenzoic acid as an acceptor: Determination of various physical parameters

Kehkashan Alam, Ishaat M. Khan

PII: S1566-1199(18)30443-9

DOI: 10.1016/j.orgel.2018.08.037

Reference: ORGELE 4851

To appear in: *Organic Electronics*

Received Date: 12 July 2018

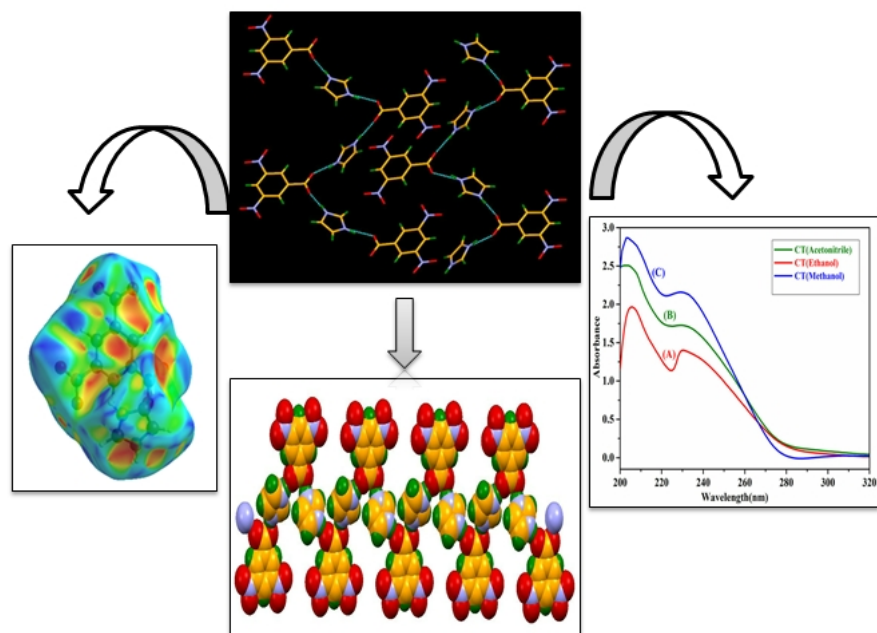

Accepted Date: 20 August 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Graphical Abstract

Dynamics of charge transfer in complex of acceptor-donor, single crystallography, absorption spectra, Hirshfeld surface analyses and Benesi-Hildebrand plots of CT complex
