This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Freeze-casting enables the creation of porous microstructures with unique acicular pores.
- Gas diffusion limitation of conventional electrodes due to random porosity and high tortuosity.
- Freeze-casting as a state-of-the-art approach to overcome the issues.
- Processing routes established for the fabrication of planar and tubular freeze-cast cells.
