

THE JOURNAL OF Allergy AND Clinical Immunology

AMERICAN ACADEMY OF ALLERGY
ASTHMA & IMMUNOLOGY

Editor in Chief **DONALD Y. M. LEUNG, MD, PhD**

Managing Editor **NANCY T. HOPPER**

Issue Manager **MATTHEW TOMASHESKI**

INSTRUCTIONS FOR AUTHORS

All manuscripts must be submitted online through the JACI Editorial Manager (EM) Web site at <http://www.editorialmanager.com/jaci>. Electronic files of the manuscript contents must be uploaded at the Web site, and the on-screen steps should be followed to submit the manuscript to the Editorial Office.

Items pertaining to manuscripts submitted for publication, as well as letters or other forms of communication regarding the editorial management of the Journal should be sent to:

The Journal of Allergy and Clinical Immunology
Editorial Office
National Jewish Medical and Research Center
1400 Jackson St., Suite J324
Denver, CO 80206
Telephone: (303) 398-1963
Fax: (303) 270-2269

This document contains complete guidelines for the preparation of your manuscript. For instructions regarding online submission, please see the Tutorial for Authors and Guidelines for Submitting a Revision on the EM Web site. Technical support is available by e-mail at jacistaff@njc.org. In any correspondence, please provide the corresponding author's name, title of the manuscript, manuscript number (if assigned) and a clear description of the problem.

Please note: Statements and opinions expressed in the articles and communications in the Journal are those of the author(s) and not necessarily those of the Editor(s) or publisher, and the Editor(s) and publisher disclaim any responsibility or liability for such material. Neither the Editor(s) nor the publisher guarantee, warrant, or endorse any product or service advertised in this publication, nor do they guarantee any claim made by the manufacturer of such product or service.

Article Types

The Journal will consider publication of several types of manuscripts:

A. Original articles. These should describe fully, but as concisely as feasible, the results of original clinical and/or laboratory research. Original articles may not exceed seven printed pages, including text, references, tables and figures.

The manuscript should be organized in the order listed below. ***Failure to follow this format may result in the manuscript being returned to the author(s) for revision prior to review.***

July 2005 15A

The title page, abstract, keywords, abbreviations, text, acknowledgements, references, tables and figure legends should be included in one word-processing file (in .doc or .wpd format). Figures should be loaded as separate files in the format specified below.

1. *Title page.* The full title should be relevant and concise (less than 15 words). It should be followed by:

- The list of authors, including their full names, highest academic degrees, and institutional affiliations. Restrict the list of authors to those who have made material contributions to the research and who contributed to the writing and review of the manuscript.
- The name, address, telephone number, fax number, e-mail address of the author who should be contacted regarding reprint requests or other correspondence received in the Editorial Office regarding the manuscript.
- A declaration of all sources of funding. Authors are required to disclose any financial relationship with a biotechnology and/or pharmaceutical manufacturer that has an interest in the subject matter or materials discussed in the submitted manuscript.
- A total word count, which includes the number of words in the *body* of the manuscript (Introduction through Discussion only); the abstract should not be included in the count. Figure and table legends are included in the estimation of the overall space required for figures and tables, so they should not be counted here.

2. *Capsule summary.* A brief summary emphasizing the importance of the article will be presented in a box within the article itself. Provide 2-3 sentences detailing what is already known about this topic and explaining what your study adds to the current knowledge base.

3. *Abstract.* The abstract must be **no longer than 250 words**. It should summarize the results and conclusions concisely. Tabular data should not be included and acronyms/abbreviations should be avoided or spelled out fully. Abstracts should be structured as follows:

- **Background:** What is the major problem that prompted the study?
- **Objective:** What is the purpose of the study?
- **Methods:** How was the study done?
- **Results:** What are the most important findings?
- **Conclusion:** What is the most important conclusion drawn and what is the clinical relevance of the results?

4. *Keywords.* A list of up to ten keywords should follow the abstract.

5. *Abbreviations.* Provide a list of any abbreviations/acronyms (and their definitions) on a separate page

following the keywords. Only standard abbreviations are to be used. Consult Scientific Style and Format by the Council of Biology Editors or the AMA's Manual of Style. A laboratory or chemical term or the name of a disease process that will be abbreviated must be spelled out at first mention, the acronym or abbreviation following in parentheses.

Please note: Abbreviations in the title and abstract are not acceptable. Even if they are included in the list of abbreviations, they should be spelled out in those locations.

6. *Text.* The manuscript should be written in clear and concise English. Authors whose primary language is not English should obtain assistance with writing to avoid grammatical problems. **The text should be organized in sections as follows: Introduction, Methods, Results, and Discussion.** Each section should begin on a new page. The generic terms for all drugs and chemicals should be used.

In studies involving human subjects, a statement describing approval by the Institutional Review Board is required. Studies involving experimental animals must include a statement in the Methods section indicating which guidelines were followed for the care and use of the animals (e.g., the "Principles of Laboratory Animal Care" formulated by the National Society for Medical Research or the "Guide for the Care and Use of Laboratory Animals" prepared by the Institute of Laboratory Animal Resources, National Research Council, and published by the National Academy Press [revised 1996]).

7. *Acknowledgments.* General acknowledgments for consultations, statistical analyses, and the like should be listed at the end of the text, including full names of individuals involved. However, acknowledgement of funding should be listed on the title page.

8. *References.* It is the Editors' expectation that authors will perform a comprehensive search of the literature to gather the most current articles relative to the subject matter. All references that are five years old or more should be replaced with current literature, unless the referenced publication is a classic work that underscores the core subject.

References should follow "Vancouver style." See http://www.nlm.nih.gov/bsd/uniform_requirements.html for more information. Manuscripts in preparation, personal communications, and other unpublished information should *not* be cited in the reference list but may be mentioned in the text in parentheses. The references must be identified in the text by superscript Arabic numerals and numbered in consecutive order as they are mentioned in the text. The list of references, in numeric sequence, should be typed at the
