

Accepted Manuscript

On the Relevance of a Business Constraint to an Event Log

Claudio Di Ciccio, Fabrizio Maria Maggi, Marco Montali,
Jan Mendling

PII: S0306-4379(16)30645-7
DOI: [10.1016/j.is.2018.01.011](https://doi.org/10.1016/j.is.2018.01.011)
Reference: IS 1301

To appear in: *Information Systems*

Received date: 22 December 2016
Revised date: 28 August 2017
Accepted date: 25 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An approach for the automated discrimination of relevant satisfactions from vacuous satisfactions of constraints in discovered declarative process models is proposed.
- The solution to the problem is based upon the semantics of the constraints.
- The checking of constraint satisfactions is based on the replay of the log on annotated finite state automata.
- The implemented tool is integrated with a process discovery algorithm and available online.
