Classification of glucose records from patients at diabetes risk using a combined Permutation Entropy algorithm

D. Cuesta–Frau, P. Miró–Martínez, S. Oltra–Crespo,
J. Jordán–Núñez, B. Vargas, L. Vigil

PII: S0169-2607(18)30206-2
DOI: <https://doi.org/10.1016/j.cmpb.2018.08.018>
Reference: COMM 4779

To appear in: *Computer Methods and Programs in Biomedicine*

Received date: 12 February 2018
Revised date: 9 August 2018
Accepted date: 30 August 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- First time Permutation Entropy is applied to glucose time series.
- Test of different customizations for Permutation Entropy in order to address equal values and amplitude variations.
- Prediction of evolution to diabetes based on a Permutation Entropy analysis of the glucose time series.
