This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- > Multi-scale mixed aleatory and epistemic uncertainties in the composite structural-acoustic system are considered.
- > An evidence-theory-based polynomial expansion method (EPEM) is developed to analyze the periodical composite structural-acoustic system with multi-scale mixed aleatory and epistemic uncertainties.
- > Numerical examples are presented to demonstrate the effectiveness and efficiency of the proposed method.
