This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Flow of a yield-stress polymer microgel confined to almost-square microchannels was studied
- The rheological behaviour of a yield-stress fluid changes when it is confined to small-enough channels
- The yield stress vanishes when the size of the microchannels approaches the size of the polymer microgel particles.
