Title: Promising effect of combining [60]Fullerene nanoparticles and calcium hydroxide on thermal stability and flammability of Poly(ethylene-co-vinyl acetate)

Authors: Nabil Omri, Mohamed Amine Oualha, Henri Vahabi, Nouredine Amdouni, Manef Abderrabba, Fouad Laoutid

PII: S0040-6031(18)30306-X
DOI: <https://doi.org/10.1016/j.tca.2018.08.013>
Reference: TCA 78072

To appear in: *Thermochimica Acta*

Received date: 28-5-2018
Revised date: 11-8-2018
Accepted date: 14-8-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Promising effect of combining [60]Fullerene nanoparticles and calcium hydroxide on thermal stability and flammability of Poly(ethylene-co-vinyl acetate)
