This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- pupils randomly assigned to single-sex schools outperform their counterparts in coed schools
- conversion of single-sex schools to coed schools lead to worse academic outcomes for both boys and girls
- for boys, school-level exposure to mixed-gender peers makes a difference
- for girls, class-level exposure to mixed-gender peers is important
