Modeling the albedo of Earth-like magma ocean planets with H₂O-CO₂ atmospheres

W. Pluriel, E. Marcq, M. Turbet

PII: S0019-1035(18)30176-3
DOI: <https://doi.org/10.1016/j.icarus.2018.08.023>
Reference: YICAR 12998

To appear in: *Icarus*

Received date: 22 March 2018
Revised date: 20 August 2018
Accepted date: 27 August 2018

Please cite this article as: W. Pluriel, E. Marcq, M. Turbet, Modeling the albedo of Earth-like magma ocean planets with H₂O-CO₂ atmospheres, *Icarus* (2018), doi: <https://doi.org/10.1016/j.icarus.2018.08.023>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Albedo of H₂O-CO₂ atmospheres found to follow simple analytical parameterization
- Clouds dominate albedo at lower surface temperatures
- Albedo increases with CO₂/H₂O ratio
- Albedo increases with stellar temperature
