Interaction of straw amendment and soil NO₃⁻ content controls fungal denitrification and denitrification product stoichiometry in a sandy soil

Mehmet Senbayram, Reinhard Well, Roland Bol, David R. Chadwick, David L. Jones, Di Wu

PII: S0038-0717(18)30300-6

DOI: [10.1016/j.soilbio.2018.09.005](https://doi.org/10.1016/j.soilbio.2018.09.005)

Reference: SBB 7272

To appear in: *Soil Biology and Biochemistry*

Received Date: 22 June 2018

Revised Date: 5 September 2018

Accepted Date: 5 September 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- i) Straw application rate does not directly affect (N_2O/N_2O+N_2) ratio.
- ii) N_2O emission following straw application is controlled by soil NO_3^- content.
- iii) Straw addition increases fungal N_2O .
