Chromatin immunoprecipitation and high throughput sequencing of SVCV-infected zebrafish reveals novel epigenetic histone methylation patterns involved in antiviral immune response

Regla M, Medina-Gali, Melissa Belló-Pérez, A. Martínez-López, A. Falcó, M.M. Ortega-Villaizan, José A. Encinar, Beatriz Novoa, Julio Coll, Luis Perez

PII: S1050-4648(18)30529-1

DOI: [10.1016/j.fsi.2018.08.056](https://doi.org/10.1016/j.fsi.2018.08.056)

Reference: YFSIM 5514

To appear in: *Fish and Shellfish Immunology*

Received Date: 31 May 2018

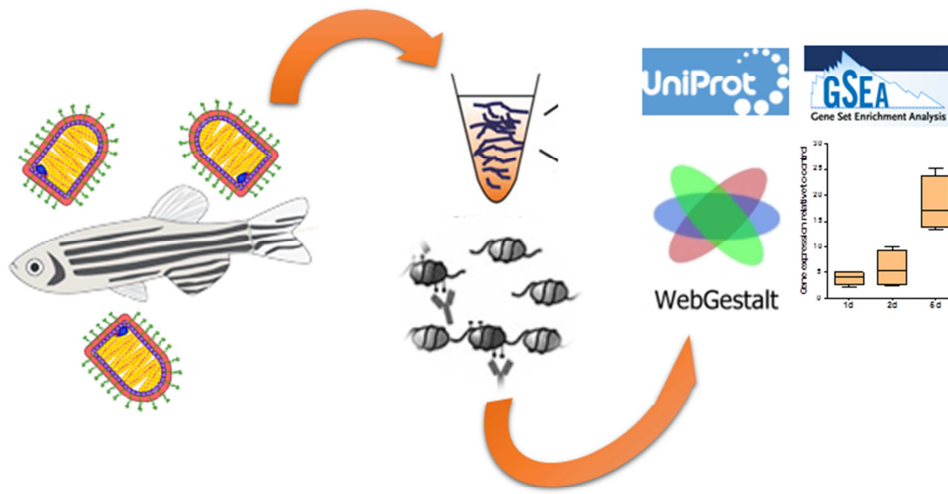

Revised Date: 13 August 2018

Accepted Date: 28 August 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.
